

6th International Conference in Cardiovascular - Thoracic Nursing 2018

“Transforming Long-Term Care for Patients with Cardiovascular Thoracic Disease”

Mandalay Hospital, Mandalay, Myanmar

Organized by Thai Cardio - Thoracic (CVT) Nurses Association

December 11 – 13, 2019

Background

Cardiovascular disease (CVD) continuing care and long-term care are important issues for world health, because half of the world's population lives in Asia. Asian countries such as Myanmar, Japan, Singapore, Malaysia, Indonesia, Thailand and other ASEAN countries have greater mortality and morbidity from coronary heart disease. Thailand has launched the policy of acceleration and establishment of an ASEAN Economic Community (AEC) by 2015. According to ASEAN Strategic Framework on Health Development (2010-2015), all ASEAN citizens will lead healthy lifestyles consistent with their values, beliefs and culture in supportive environments by 2020. Therefore, nurses and healthcare team among Asian countries should be prepared for the CVT care competency of long term care. Nurses in international country should improve their competency of continuing and long term care care for cardiovascular -thoracic nursing practice of health promotion, disease prevention, curative and rehabilitation for patients with CVD disease by using evidence based practice, research and innovation.

In order to improve the quality of CVT care among international counties, healthcare team and nurses should have the opportunity to share the researches and innovation in the International nursing conference. In addition, CVT care teams should include networks created among nurses in Asia countries. This conference provides an opportunity for multidisciplinary teams such as researchers, clinical nurses, academic nurses and other healthcare providers to get together to share and discuss of knowledge and methods of care in order to gain the knowledge of comprehensive and continuing care for cardiovascular -thoracic nurses by using research / innovative CVT care. It is our expectations that 6th International Conference in Cardiovascular - Thoracic Nursing 2018 “Transforming Long-Term Care for Patients with Cardiovascular Thoracic Disease” will accomplish each of the following objectives.

Objectives:

1. Enhance updated knowledge /EVP and innovation of transforming and long term care for CVT nursing in national and international level.
2. Encourage international interdisciplinary team and nurses discussion and sharing in research / Innovation and utilization of CVT care.
2. Promote international networking of CVT care for participants among Asian/ countries and other countries.

Target Group:

There are 100-150 participants of multidisciplinary teams such as researchers, clinical nurses, academic nurses and other healthcare providers from Thailand and other countries.
